

### **Freestanding Bath Tub** **Installation Instructions**

#### **Notes:**

- Review and abide by all building and plumbing codes.
- When the tub is received, inspect and look for possible damage.
- Each Novatto tub should be installed by a professional.
- Handle each Novatto tub with care as they are very heavy and hard to handle.
- Do a thorough evaluation of the floor joists to assure that the weight of the tub will be supported.
- Allow enough access for plumbing connections.
- When installing the drain to the bath, install according to the drain manufacturer's installation instructions.
- Open the hot and cold water supply valves and check for leaks.
- Fill to overflow and double check for leaks.
- Clean up and enjoy!

When cleaning up after installations, **DO NOT USE ABRASIVE CLEANERS**, as they may scuff and change the finish on the copper and stone sinks. Use soft soap and warm water with a washcloth to clean the surface. If more information is needed refer to "Novatto's Care and Maintenance" section.
