

Glass Sink Information and Care

Novatto's glass vessel sinks are incredibly easy to clean and maintain. To keep glass sinks in pristine condition simply wipe down with a soapy sponge or soft cloth, rinse and dry after every use. A glass cleaner or any other non-abrasive glass cleaner may be used if grime or minerals build up.

Caution: Do NOT use metal brushes, scouring pads or any abrasive cleaners when cleaning your glass sink as this may scratch or discolor the glass. If the bottom of the glass sink is hand painted use basic soap and water as other cleaners may discolor or damage the paint.

Due to the unique hand crafted quality of Novatto's painted glass sinks; color, variance and design pattern may vary from sink to sink. Tempered glass is a glass that has been processed by controlled thermal or chemical treatments to increase its strength as compared to normal glass. Novatto's in house testing have found them to be very durable and forgiving. Normal items such as toothbrushes, small jewelry, bottles, etc., should not scratch or break a Novatto glass sink. Novatto recommends using a professional plumber for installing your glass sink. Do not allow the glass vessel sink to come in contact with steel or other glass objects which could scratch or damage the sink.
